

KEY BENEFITS

- Exonerate drivers
- Automate FNOL
- Accident prevention
- Insurance Savings
- Digitize claims & maintenance reporting

DashMatics: automate taxi fleet safety and performance

The CameraMatics vehicle operations cloud for Taxi Operators is designed to improve visibility, digitize processes, and manage risk.

Dual front dash and interior facing cameras integrated with our connected platform simultaneously capture video footage of the driver and the road ahead. Artificial Intelligence (AI) triggers automatic video recording before, during and after any event and this footage is sent in real-time alerts to fleet managers.

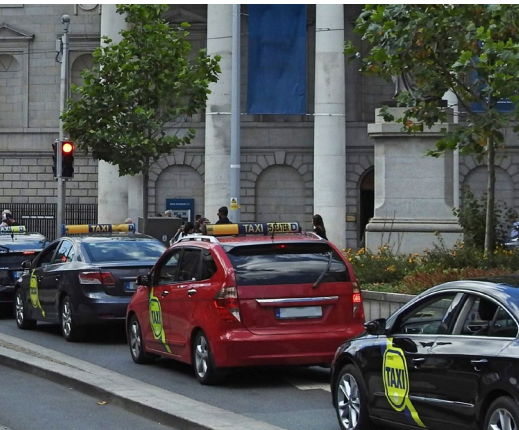

Driver attentiveness is monitored, and voice alerts can be triggered in response to drowsiness, distraction, and mobile phone usage to help avoid accidents.

SMART WORKFLOWS

Simple intuitive apps digitize traditional manual and paper-based fleet management processes such as driver coaching, accident reports and FNOL, maintenance, and delivery reporting to enable the capturing

and sharing of vital information in real-time, reducing the reliance on human memory and streamlining:

- ✔ **Claims and risk management**
- ✔ **Training and development**
- ✔ **Remote workforce management**

When combined with high-definition video they enable taxi operators to demonstrate compliance, provide indisputable evidence to protect against false claims and resolve genuine claims in a timely cost-efficient manner.

LEAN, AGILE, RESPONSIVE FLEET MANAGEMENT

Real-time visibility, intuitive dashboards, automated incident recording and digitized processes enable single vehicle and fleet operators to manage risk and empower and retain drivers.

Insurers can develop better informed risk profiles of fleets, passing on savings where appropriate and expediting the claims process.

Drivers are empowered with a simple easy-to-use app enabling remote learning, simplified admin, reduced vehicle down-time and the peace-of-mind provided by automated collection of incident related evidence.

About CameraMatics

CameraMatics is a driver-centric cloud platform that empowers fleet operators and drivers to continuously improve performance and safety with enhanced visibility and digitized smart processes.

Our platform can be deployed to any vehicle type and translates big data from onboard vehicular sensors, smart cameras, and driver apps to support driver safety, load security and continuous learning and improvement.
